

## A Brilliantly Successful STSP

### Exceptional Leadership—Director-general Chen Receives the Civil Service Outstanding Contribution Award

Having amassed a great deal of administrative experience at the Hsinchu Science Park (HSP) and Export Processing Zone, Director-general Chen has been much involved in STSP development and planning since 1996. For his contributions to the establishment of the STSP as an important optoelectronics industry hub, Director-general Chen was selected from a group of 84 exemplary civil servants to be awarded the Civil Service Outstanding Contribution Award, the most prestigious award for public servants. This award, which he received on December 12, 2007, is not only an individual accomplishment, but an acknowledgement of the entire STSP team.

### The Gold Standard—Award of Excellence in Public Works

With intense cooperation among the construction teams and the utilization of cantilevering and nighttime construction, the STSP/National Highway No. 1 Connective Road Construction Project (Phase I) was successful in avoiding obstruction to existing avenues of transportation, and emerged from among 30,000 entries nationwide to win the 8<sup>th</sup> Annual Public Construction Golden Quality Award for excellence in quality civil engineering on December 21, 2007. This is the first construction-related award a science park has received upon first submission. The Connective Road is expected to commence operation following the completion of Highway Interchange by the Ministry of Transportation and Communications. The Connective Road will cut down on the employee commute and lower shipping costs for operational effectiveness.
