Embrace the World Based in the STSP, with a Global Outlook

Attended the “2008 International Association of Science Parks (IASP) World Conference” in Johannesburg S. Africa

International Association of Science Parks (IASP) World Conference was held in Johannesburg S. Africa on September 13, 2008. Chun-Wei Chen, Director-general of the STSP Administration and other 7 colleagues represented Taiwan in attendance.

“The Science Park’s role in

accelerating informational economic growth – comparison between emerging nations and developed nations” was IASP’s theme in 2008. In addition to attending conference workshops, the representative of Metal Industries Research and Development Center (MIRDC) and professor at National Cheng Kung University, Sian-Fa Kong gave lectures on “taking Taiwan’s small and medium business models as examples of the role of local R&D energy in the emerging medical device industry cluster,” “Science Parks’ roles in high-tech industry cluster formation,” and “STSP’s TFT-LCD industry cluster planning experience.” With their invaluable sharing of experiences, it has left a memorable impression to the participants.

Promote the STSP Enterprises Recruitment in Japan in 2008

Men-Feng Wu, Deputy Director-general of the STSP Administration led the delegation to Osaka and Tokyo for enterprises recruitment on October 2-11, 2008; also on the trip were the Metal Industries Research and Development Center (MIRDC) personnel. The group also visited Daejeon and Jeju in Korea for the purpose of knowledge and learning exchange. The delegates aimed to convey the STSP's good investment environment to potential investors and to provide the related technology and supply chain with support and consultation. Potential investors were positive about the comprehensive information presented

and were interested in visiting the STSP in person to assess the investment possibilities.

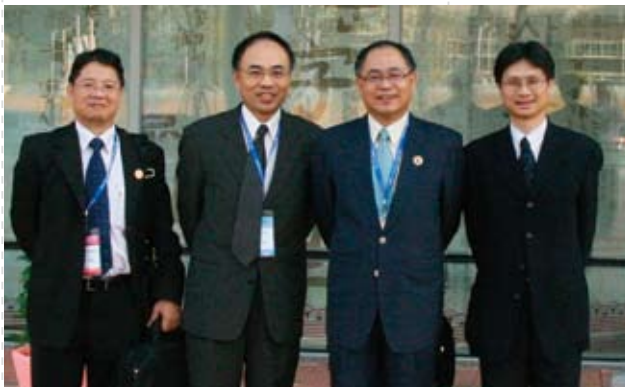

Taiwan has made promoting the localization of flat display industry an important priority of the nation. The targeted equipment home-production rate is 60% by 2009. To realize this goal, it is necessary to cooperate with Japanese industries and to attract their enterprises to establish manufacturing plants in Taiwan. To promote regional prosperity and boost Taiwan's science and technology competitive edge, the STSP Administration will work with the panel and equipment manufacturers to provide comprehensive and convenient service in order to attract more Japanese optoelectronics manufacturers to either station in the STSP or to partner with other STSP enterprises.

Attended the "2008 World Technopolis Association (WTA) Annual Convention & Seminar" in Daejeon, Korea

World Technopolis Association (WTA)

was established in Daejeon, Korea in June 1997. It was a diversified international organization with the involvement of Science Parks, technology cities, colleges, research institutes and a formal non-profit organization of UNESCO. The main purpose of WTA is to promote regional technology development and to realize science & technology progress in major science hot spots through experience sharing and cooperation, such as the international cooperation between the WTA and the IASP.

The STSP Administration has officially become a member of the WTA in 2008 due to its involvement in global discussion and development of Science Parks. The STSP Administration staff attended the annual conference on October 8-11, 2008 where Bai-Hong Chen, Chief Officer of the Planning Office, STSP Administration, gave a lecture on the "Cluster Development for Innovation: IT Cluster." The main theme of the event was "Towards Creative City: Retrospect and Prospect in Science City Development."

▲ Mr. Men-Feng Wu, Deputy Director-general of the STSP Administration (the third from the left) and the representative of Jeju Science Park, Korea at the MOU signing

The STSP Signed MOU with Korea Jeju Science Park

Korea and Taiwan have both assumed important positions in the world of high-tech industries including IC, optoelectronics, and telecommunications. What's more, Korea and Taiwan have maintained a close and friendly business partnership. The bilateral trade between Korea and Taiwan reached US\$22.95 billion in 2007, with Korea as the fifth trade partner and fourth supplier for imports. Under the profound partnership, the MOU signed between Jeju Science Park and the STSP Administration on October 10, 2008 helped reinforce the partnership between Taiwan and Korea.

Attended the "2008 IASP-Asian Divisions & Asian Science Park Association (ASP) Joint Annual Conference" in Beijing

Mr. Chun-Wei Chen, Director-general of the STSP Administration, Mr. Wen-Ke Yang, Director-general of

the Central Taiwan Science Park, and four other members attended the "2008 IASP-Asian Divisions & Asian Science Park Association (ASP) Joint Annual Conference" on October 22-24, 2008 in Beijing.

The Conference was held at Beijing Tsinghua Science and Technology Park with theme of "reunion, sharing, innovation, and development." To share his study results on the success of STSP's development, National Cheng Kung University's professor Sian-Fa Kong presented a lecture on the "STSP's Adaptability and Innovation Development Planning."

Another exciting news, Genesis Photonics Inc. (LED) was awarded with the "2008 ASPA Awards – Grand Prize of the Best Enterprise" at the conference. It outperformed fierce competitions from China's HiChina (network service), Korea's Dentis (dental implants), and Japan's OPM Laboratory (process service). Genesis was presented the award during the conference dinner.
