

Environmentally-Friendly Green Campus

Under the Green Project, the NNKIEH realized its goal of building the green campus. The PV system installed on the top of campus buildings improved the issue of high temperature and at the same time generates the electricity up to 39.5kW. The circulation system of the ecological tank at the Junior High Department introduced the underground water source, and with the installation of the filter system, the vigorous eco-system was developed. The ecological learning corridor of shrub garden was remodeled among Building A, B, and C at the Junior High Department. There inside were plants such as China Rose, Blackberry Lilly, Common Crapemyrtle Flower and Rose Moss, with a marble trail. Signs written with Chinese poems of the Tang and Sung Dynasties were also installed.

Teachers' Evaluation for Professional Development

Since School Year 2012, the NNKIEH participated in the teachers' evaluation program for professional development promoted by Ministry of Education. In School Year 2014, the number of teachers at the Senior High Department who passed the initial accreditation reached 100%; the applications of six teachers from Senior High Department and Junior High Department for the advanced evaluation of teachers' professional development were also passed. In School Year 2013, teachers at the Elementary Department also participated in teachers' evaluation program for professional development.
