

It is always the internal conflict for the youth to choose either being away from home in pursuit of achievements or returning home to realize dreams. The STSPB understands the youth, and since 2015, we have been focused on the development of high quality environment as the platform for the youth to build their enterprises. In addition, we have put both industrial development and environmental friendliness into consideration so as to support the youth to return to hometowns to realize dreams and to regenerate industrial growth.

In the past year, our "innovative startups" have integrated with resources from the industries, governmental agencies, academia and research institutes in Southern Taiwan for the provision of prototype testing, small amount production, capital investment, and counselling of industrial mentors.

Our "industrial clusters" with the enhanced development of medical device industry have successfully linked to resources from the industry, academia and the research sector and gained good reputation from trial experiences of both domestic and international users.

Our "environmental friendliness" has focused on the continuous promotion of CSR at the Park with the award recognition of the Governance of Sustainability in Practice, Environmental Sustainability of the Environmental Protection Center, and ROC Enterprises Environmental Protection Silver Award of Resource Recycling Center.

In 2015, the STSP created the turnover in excessive of NT\$700 billion and employed 80,000 workers, both reaching historical high. I would like to thank Park enterprises and STSP workers for their great efforts to lead the continuous growth of the STSP even during the global economic slowdown.

Director-general of the STSPB

Lin Weichen
